Steve and David:

Take a look at the latest ASPECT data, this version is for internal use only. I will probably loose the chemical summary page, unless you think it has value for release. Please provide any comments 1500 your time so I can release to the NMED for posting.

Warren

---

Greg and Warren,

Please find attached the preliminary mission report 3 for 1 July 2011. No significant rad or chemical detections. Trace detections of ozone, formic acid, methanol and ammonia, all consistent with wood smoke.

We have both aerial and ir images which will be provided in a subsequent data set.

The aircraft is currently refueling in Taos and will return to Santa Fe by 1430.

We will continue to look at data. Let me know if you have any questions.
